

## New Jersey 2004 Integrated List

The NJDEP has compiled the NJ 2004 Integrated List, which lists surface waters organized by degrees of impairment, called "sublists" (this is a categorization independent of the "FW1 TP(C1)" system) described in the NJDEP Surface Water Classifications. It is tied to specific monitoring sites rather than to stretches of streams. The categories are defined as follows:

### **Sublist 1: Attaining a water quality standard and no use is threatened**

- Black Brook at Madison (T, pH, DO, NO<sub>3</sub>, TDS, TSS, Un-ionized Ammonia)
- Great B. at Blackwells Pt in Harding (Aquatic Life)
- Passaic R. at Tempe Wick Rd. (Aquatic Life)
- Passaic R nr Millington (T, pH, NO<sub>3</sub>, TDS, Un-ionized Ammonia)
- Primrose B. at JHNHP and at Lees Mill Rd. (Aquatic Life)

Parameters listed above in Sublist 1 are "fully attaining"

**Sublist 2: Attaining some of designated uses, insufficient data to determine if other uses attained** (Appears Sublist 2 is not being used at present).

### **Sublist 3: Insufficient data to determine if any use is attained**

- Loantaka B. at Bluestone Terr. in Morris and at Green Village Rd. (Aq. Life)
- Passaic R. at Tempe Wick Rd. (Dissolve Oxygen)

Parameters listed in Sublist 3 have "insufficient data".

### **Sublist 4: Impaired or threatened for one or more uses, but TMDL not required**

- Black Brook at Madison (Fecal coliform)
- Passaic R. nr Millington (Fecal coliform)

Parameters listed in Sublist 4 as "not requiring TMDL"

**Sublist 5: Impaired or threatened by a pollutant, WQS not attained, TMDL required**

- Black Brook at Madison (Phosphorus)
- Black B. at New Vernon Rd in Long Hill (Aquatic Life)
- Great Brook at Woodland Rd. (Aquatic Life)
- Passaic R. at Tempe Wick Rd. (Fecal coliform)
- Passaic R. nr Millington (P, TSS, As, Cd, Cu, Pb, Hg, Ag, Zn, Cyanide)

Parameters listed in Sublist 5 as "Non Attaining"
